E35 Title

This class comprises textual strings that within a cultural context can be clearly identified as titles due to their form. Being a subclass of E41 Appellation, E35 Title can only be used when such a string is actually used as a title of a work, such as a text, an artwork, or a piece of music. Titles are proper noun phrases or verbal phrases, and should not be confused with generic object names such as “chair”, “painting” or “book” (the latter are common nouns that stand for instances of E55 Type). Titles may be assigned by the creator of the work itself, or by a social group. This class also comprises the translations of titles that are used as surrogates for the original titles in different social contexts.

Examples:

“The Merchant of Venice” (McCullough, 2005)

“Mona Lisa” (Mohen, 2006)

“La Pie or The Magpie” (Bortolatto, 1981)

“Lucy in the Sky with Diamonds” (Lennon, 1967)

E42 Identifier

This class comprises strings or codes assigned to instances of E1 CRM Entity in order to identify them uniquely and permanently within the context of one or more organisations. Such codes are often known as inventory numbers, registration codes, etc. and are typically composed of alphanumeric sequences. Postal addresses, telephone numbers, urls and e-mail addresses are characteristic examples of identifiers used by services transporting things between clients. The class E42 Identifier is not normally used for machine-generated identifiers used for automated processing unless these are also used by human agents.

Examples: “MM.GE.195” “13.45.1976” “OXCMS: 1997.4.1” ISSN “0041-5278”
ISRC “FIFIN8900116” Shelf mark “Res 8 P 10”

Immaterial

Material

Conceptual object

This class comprises non-material products of our minds and other human produced data that have become objects of a discourse about their identity, circumstances of creation or historical implication. The production of such information may have been supported by the use of technical devices such as cameras or computers.

Symbolic object

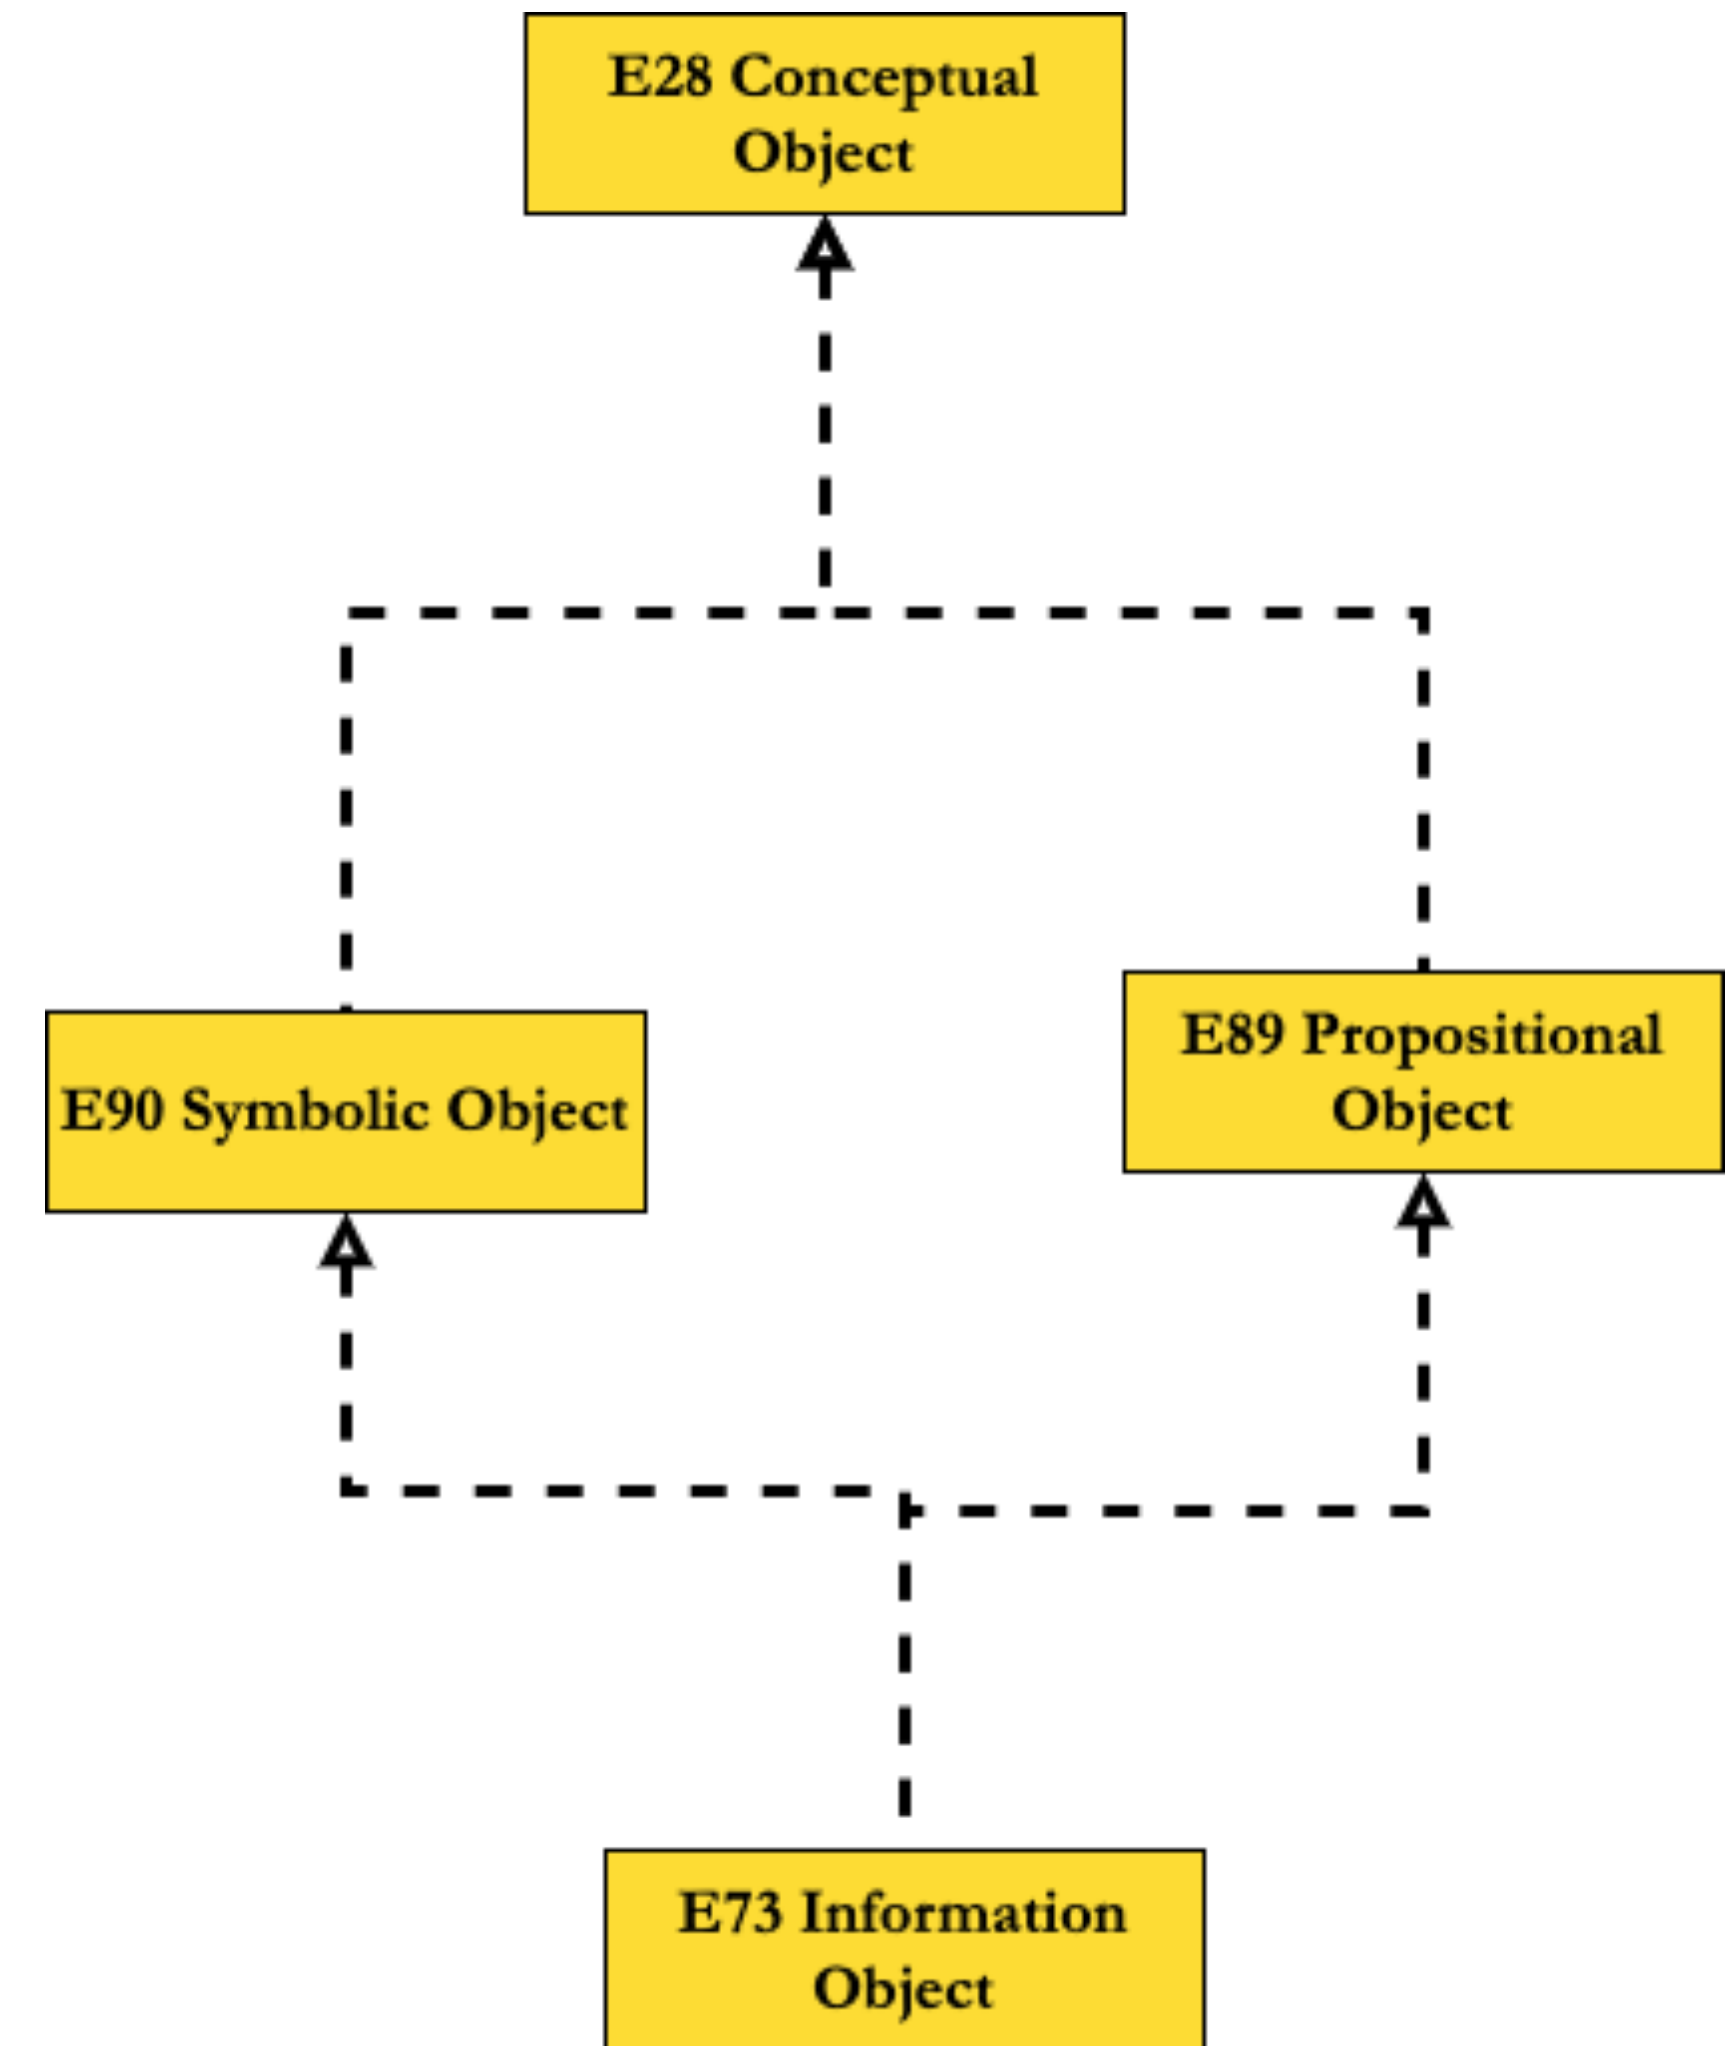

This class comprises identifiable symbols and any aggregation of symbols, such as characters, identifiers, traffic signs, emblems, texts, data sets, images, musical scores, multimedia objects, computer program code or mathematical formulae that have an objectively recognizable structure and that are documented as single units.

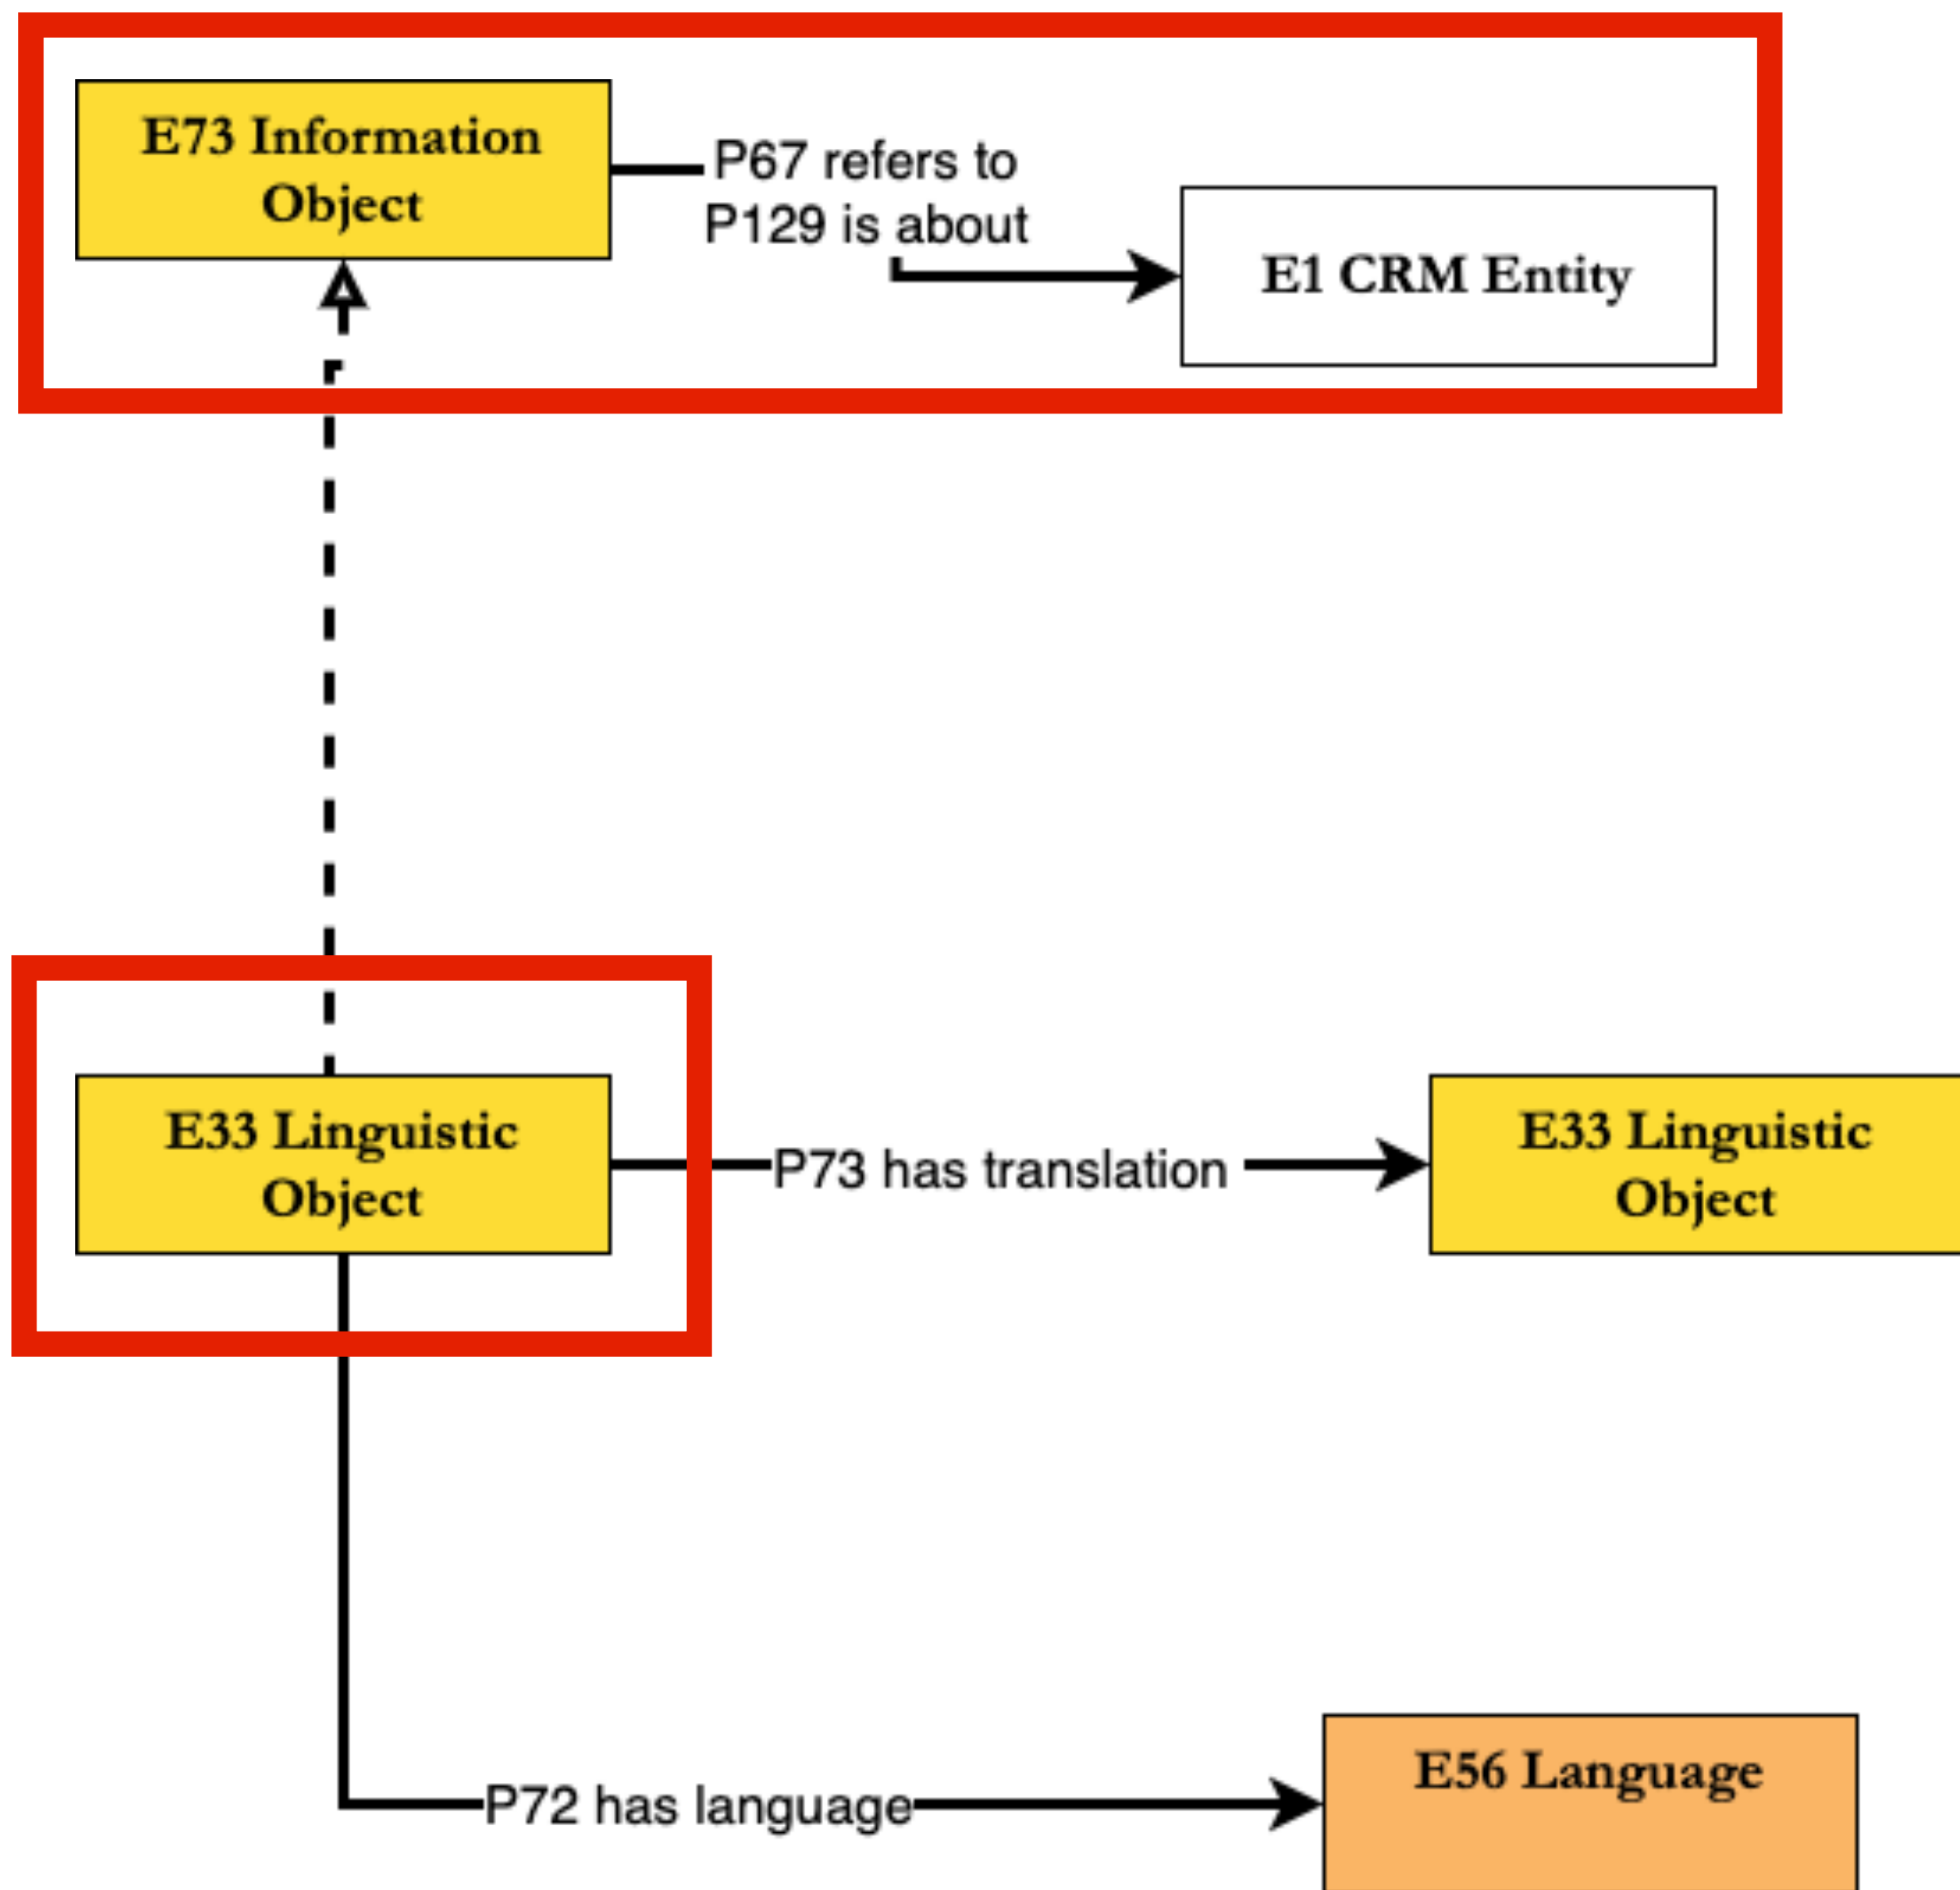

Propositional object

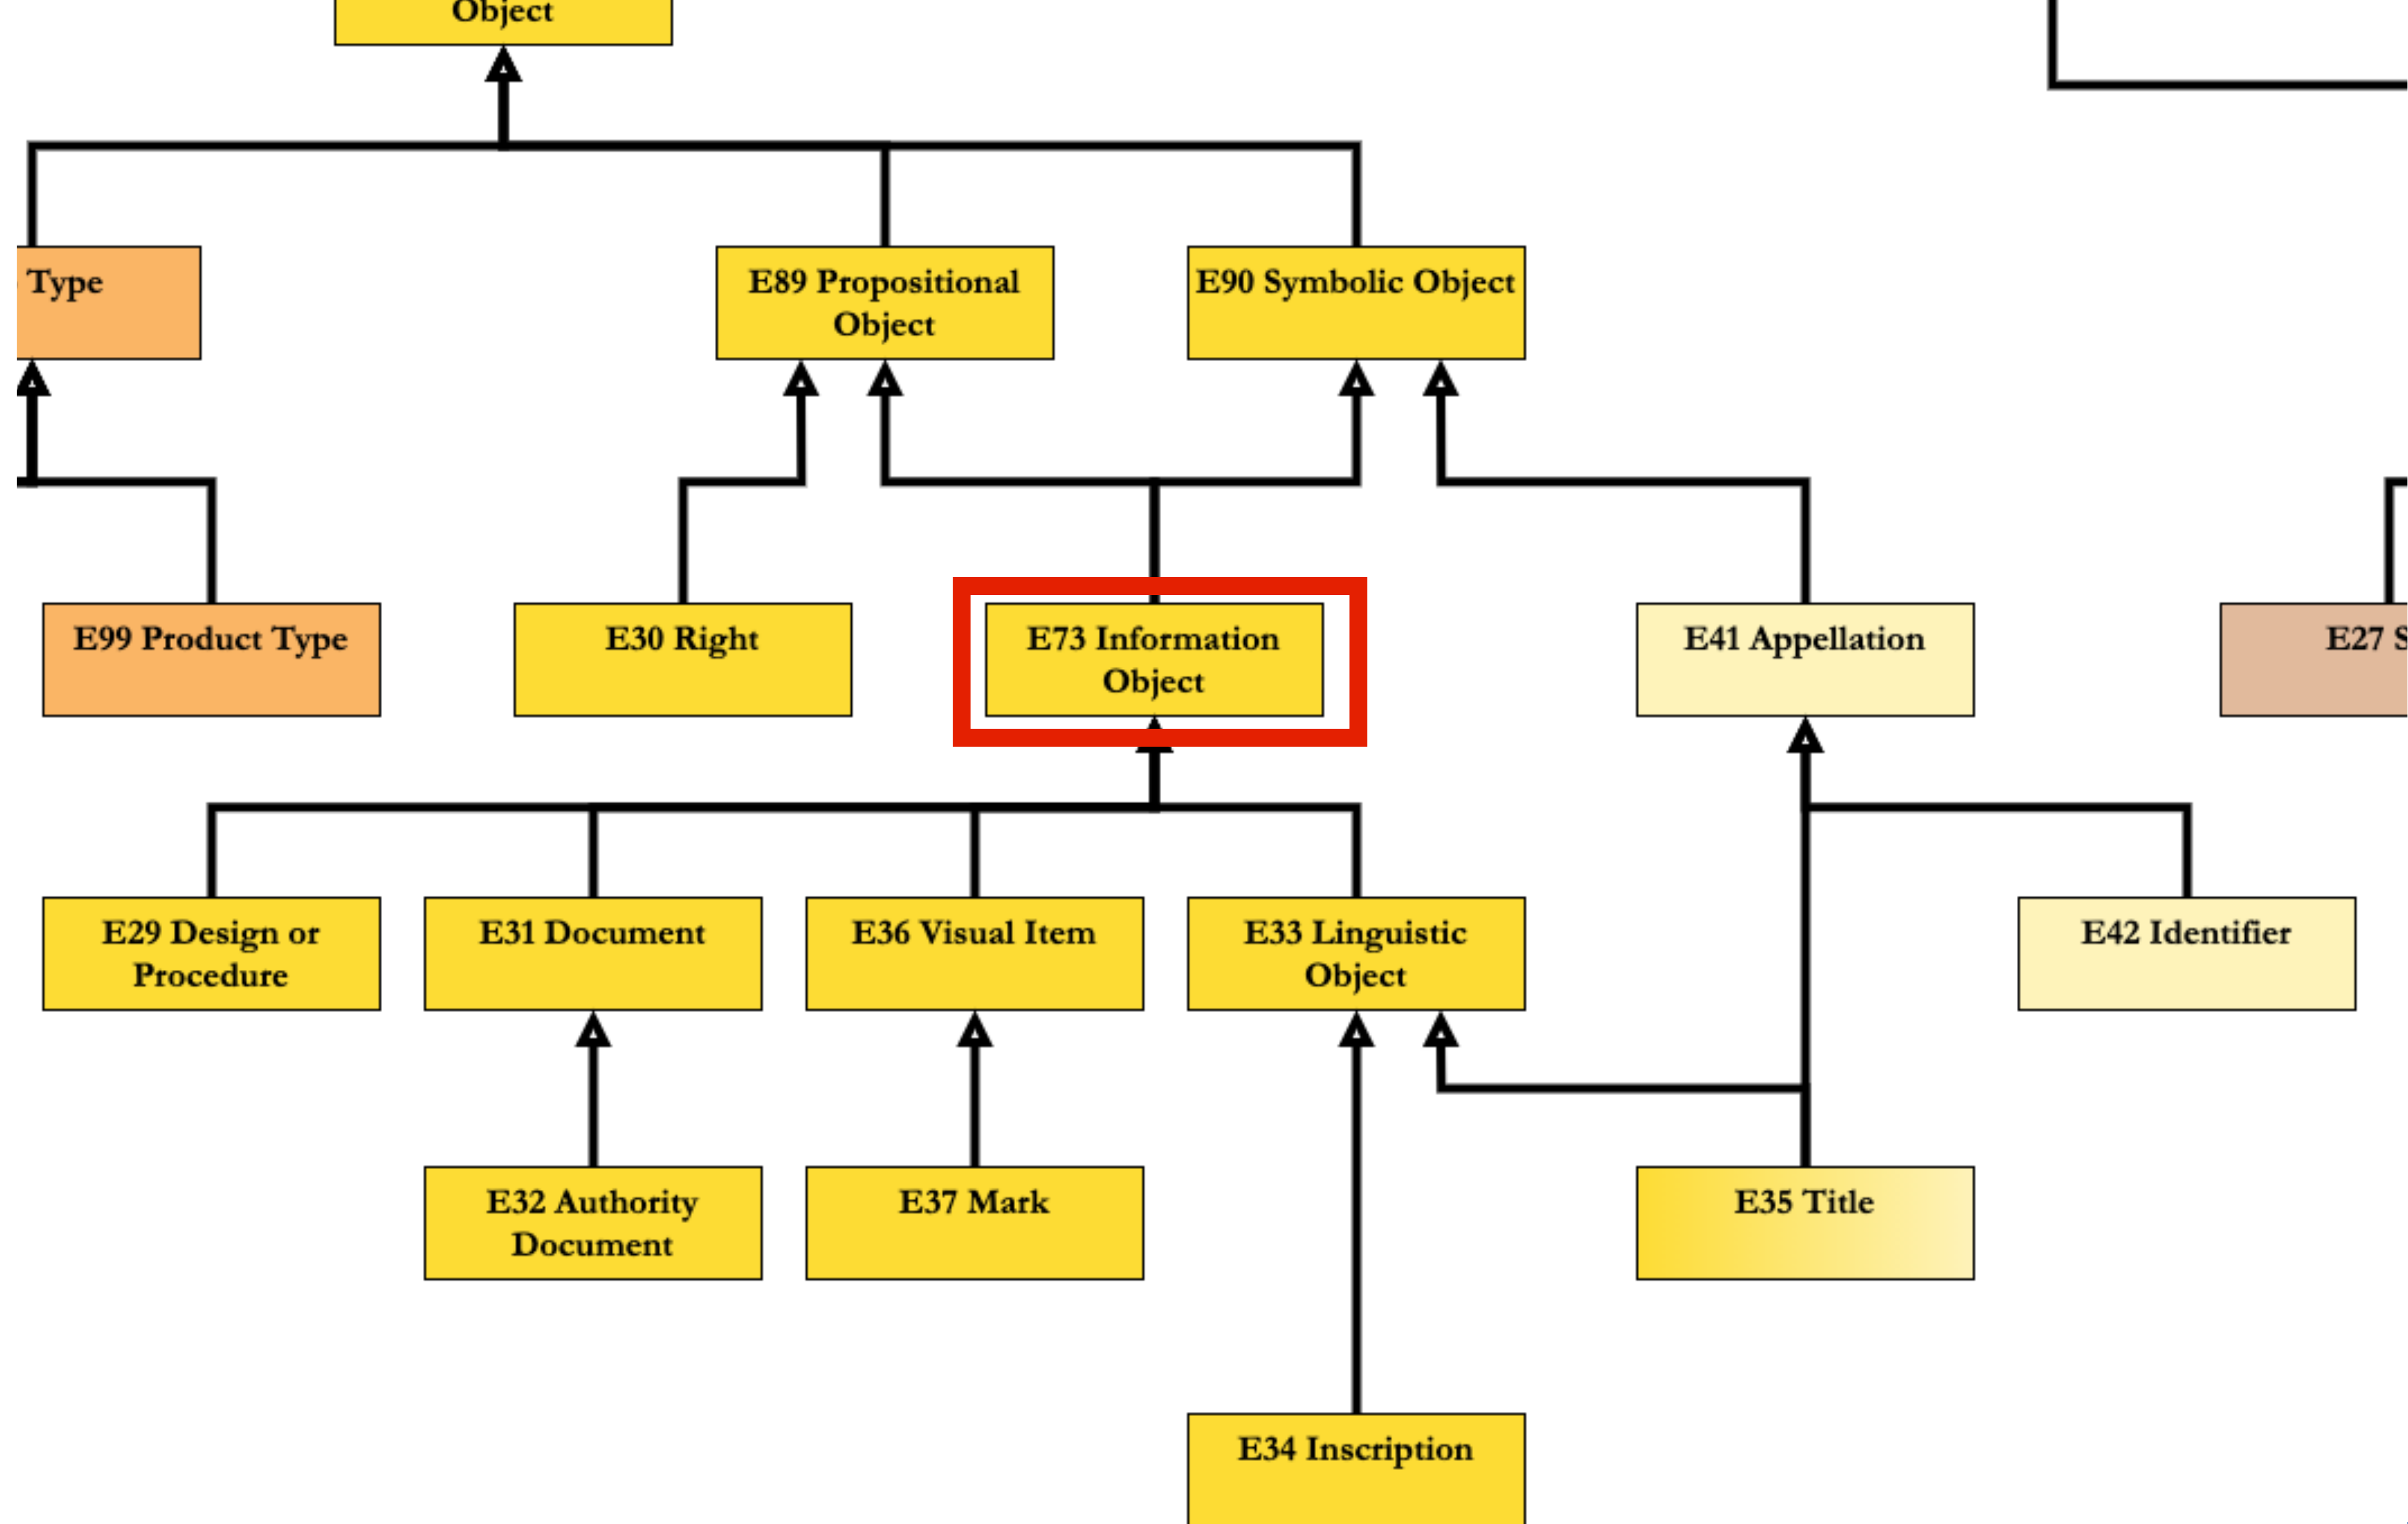

This class comprises immaterial items, including but not limited to stories, plots, procedural prescriptions, algorithms, laws of physics or images that are, or represent in some sense, sets of propositions about real or mental things and that are documented as single units or serve as topic of discourse.

Information object

This class comprises identifiable immaterial items, such as a poems, jokes, data sets, images, texts, multimedia objects, procedural prescriptions, computer program code, algorithm or mathematical formulae, that have an objectively recognizable structure and are documented as single units

E22 Human-Made Object

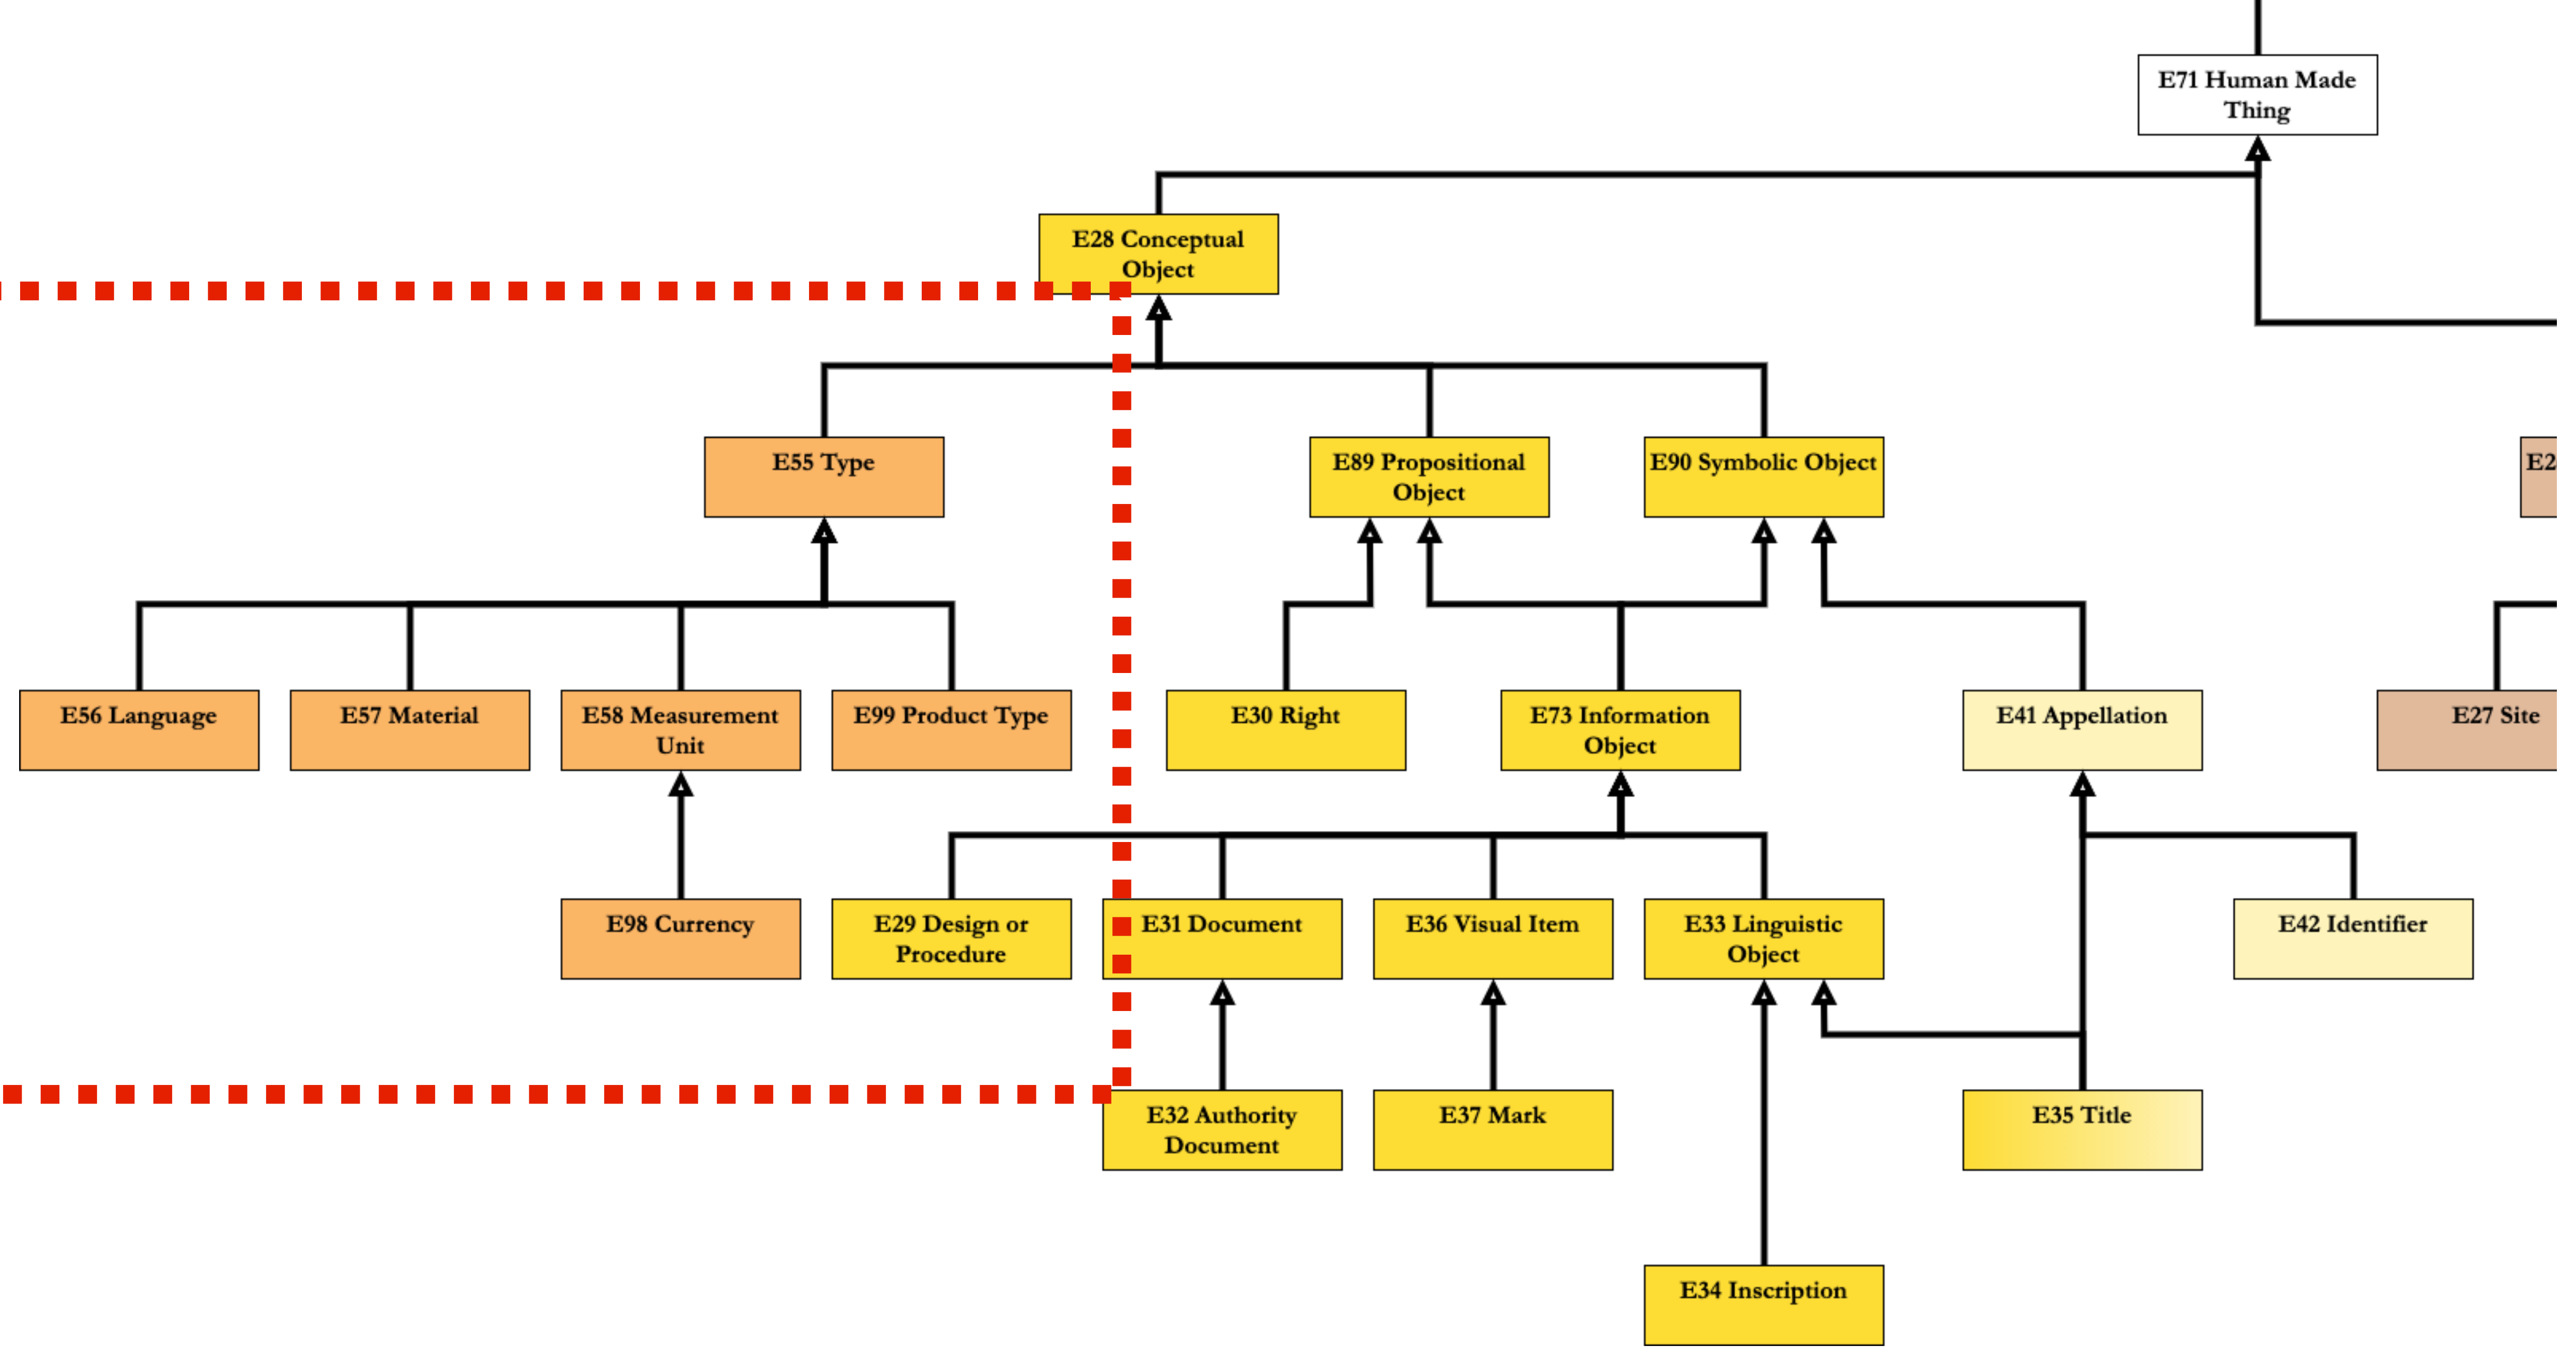

Title

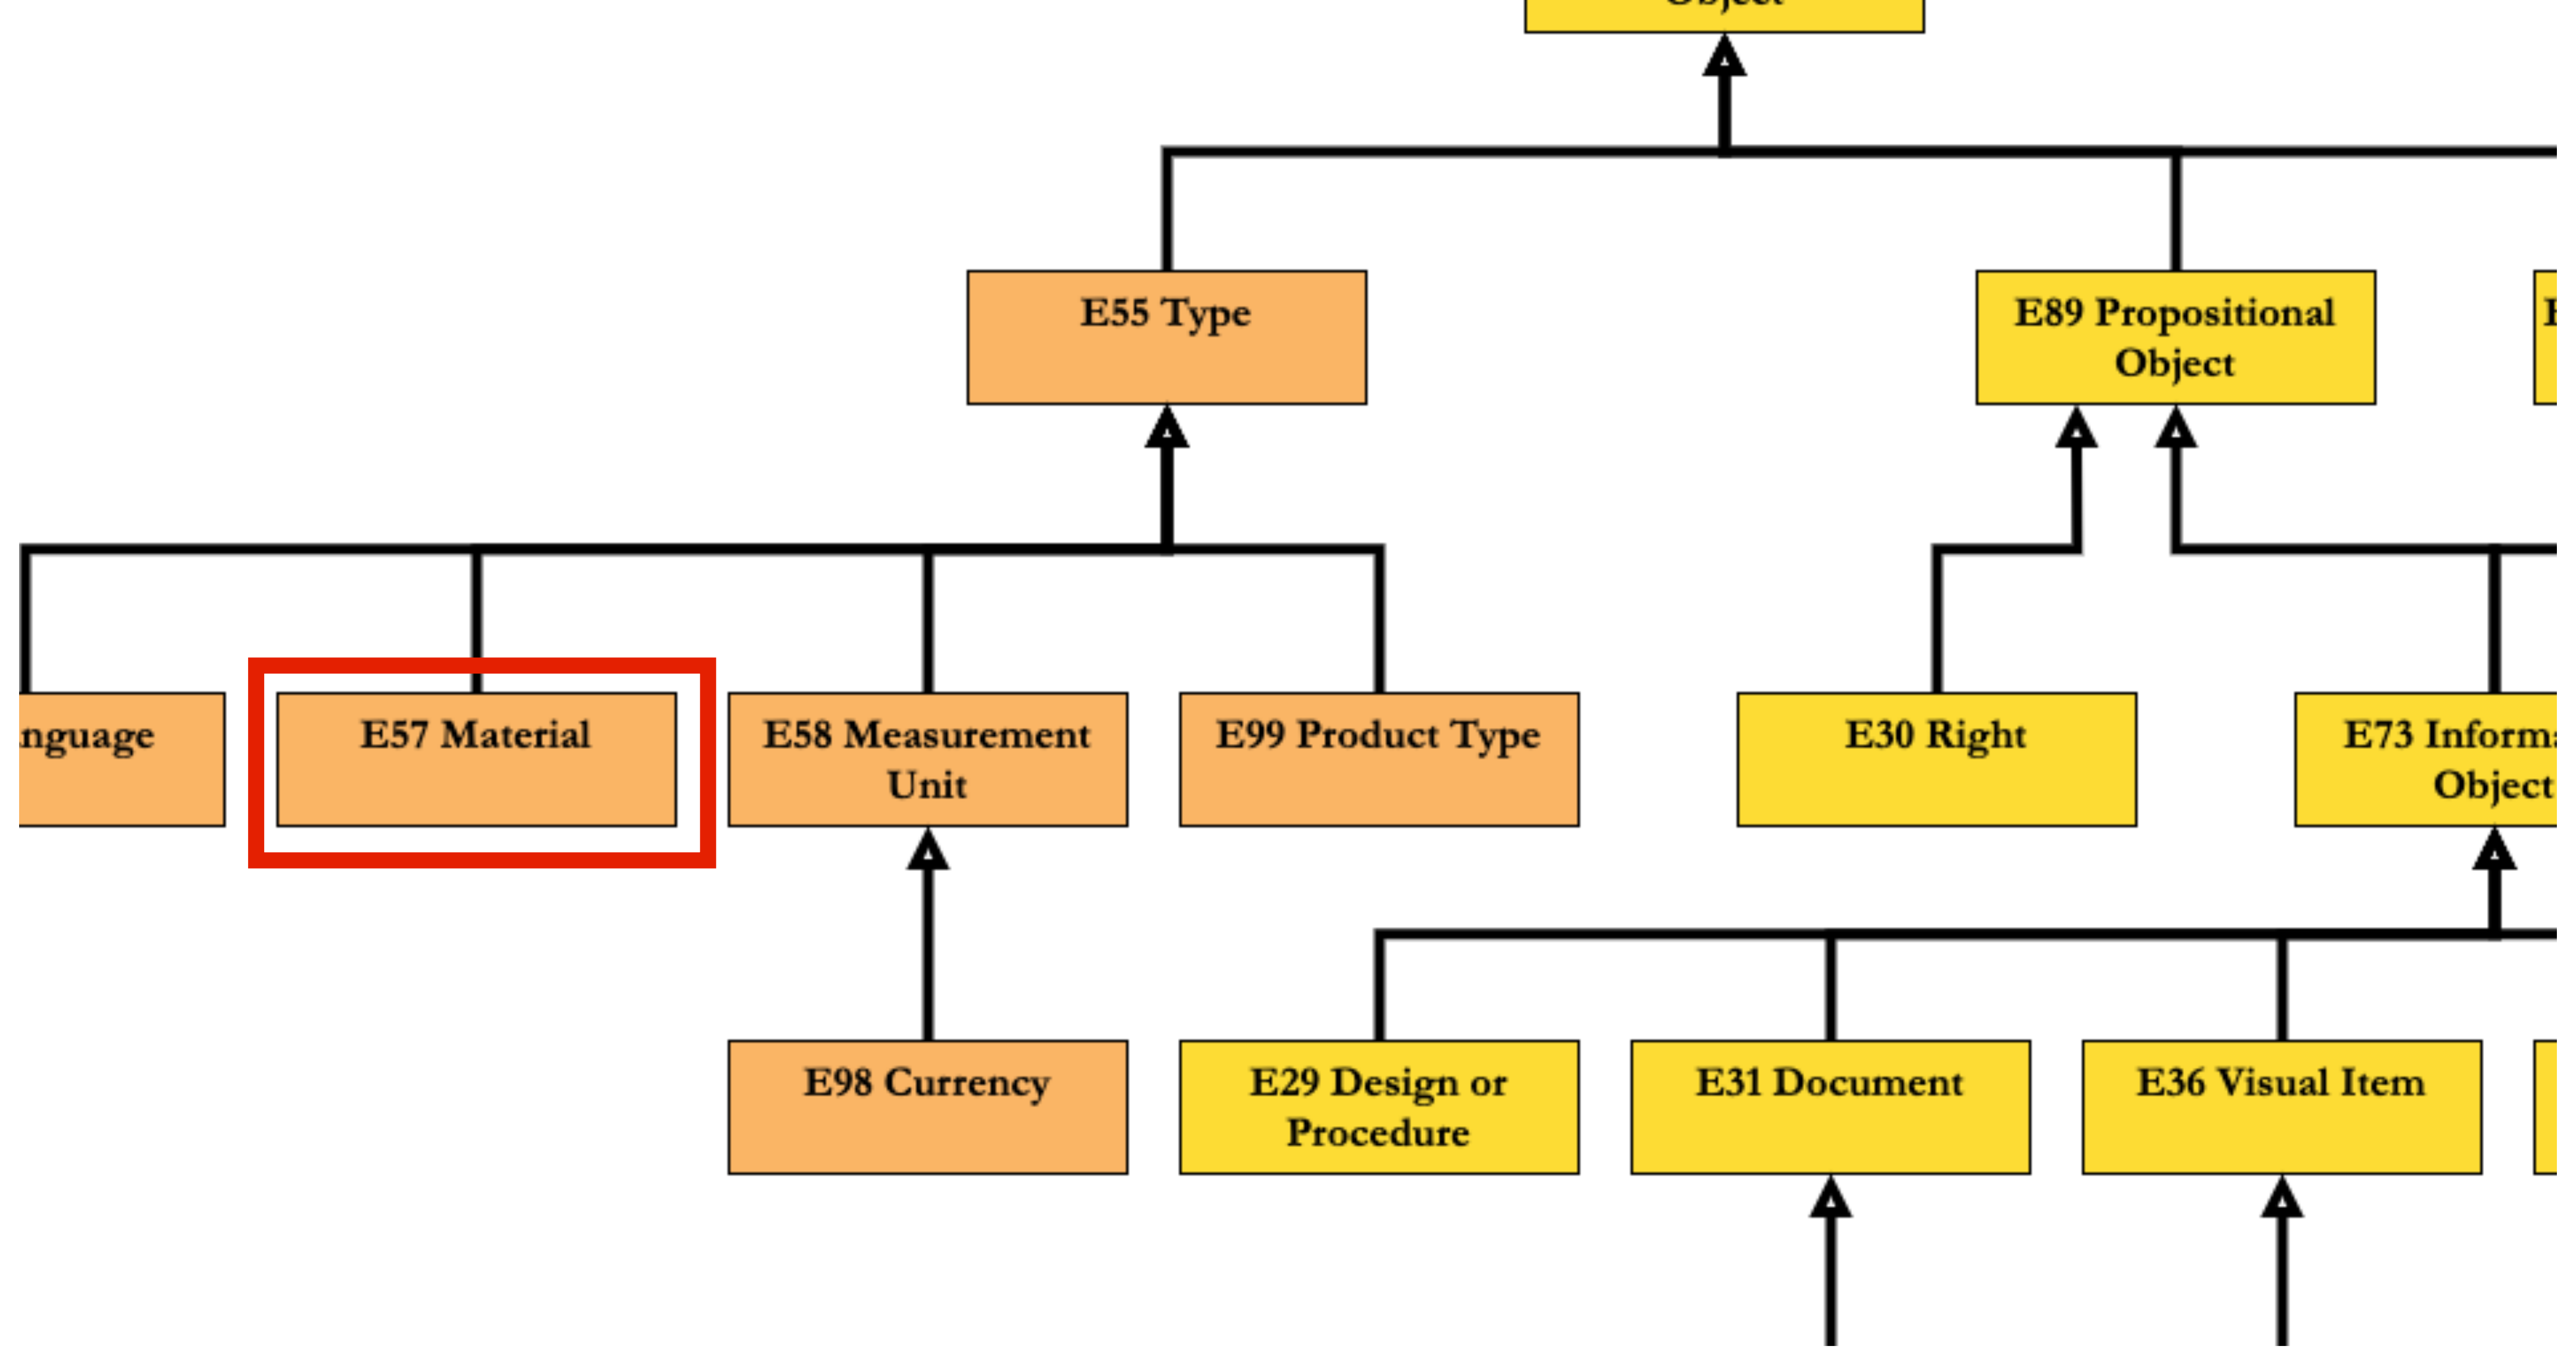

Description

Measurement

Material

Identifier

This class is a specialization of E55 Type and comprises the concepts of materials. Instances of E57 Material may denote properties of matter before its use, during its use, and as incorporated in an object, such as ultramarine powder, tempera paste, reinforced concrete. Discrete pieces of raw-materials kept in museums, such as bricks, sheets of fabric, pieces of metal, should be modelled individually in the same way as other objects. Discrete used or processed pieces, such as the stones from Nefer Titi's temple, should be modelled as parts (cf. P46 is composed of (forms part of): E18 Physical Thing).

This class comprises activities that are designed to, and succeed in, creating one or more new items. It specializes the notion of modification into production. The decision as to whether or not an object is regarded as new is context sensitive. Normally, items are considered “new” if there is no obvious overall similarity between them and the consumed items and material used in their production. In other cases, an item is considered “new” because it becomes relevant to documentation by a modification. For example, the scribbling of a name on a potsherd may make it a voting token. The original potsherd may not be worth documenting, in contrast to the inscribed one.

This entity can be collective: the printing of a thousand books, for example, would normally be considered a single event.

An event should also be documented using an instance of E81 Transformation if it results in the destruction of one or more objects and the simultaneous production of others using parts or material from the originals. In this case, the new items have separate identities and matter is preserved, but identity is not.

Examples:

the construction of the SS Great Britain (Gregor, 1971)

the first casting of the Little Mermaid from the harbour of Copenhagen (Dewey, 2003)

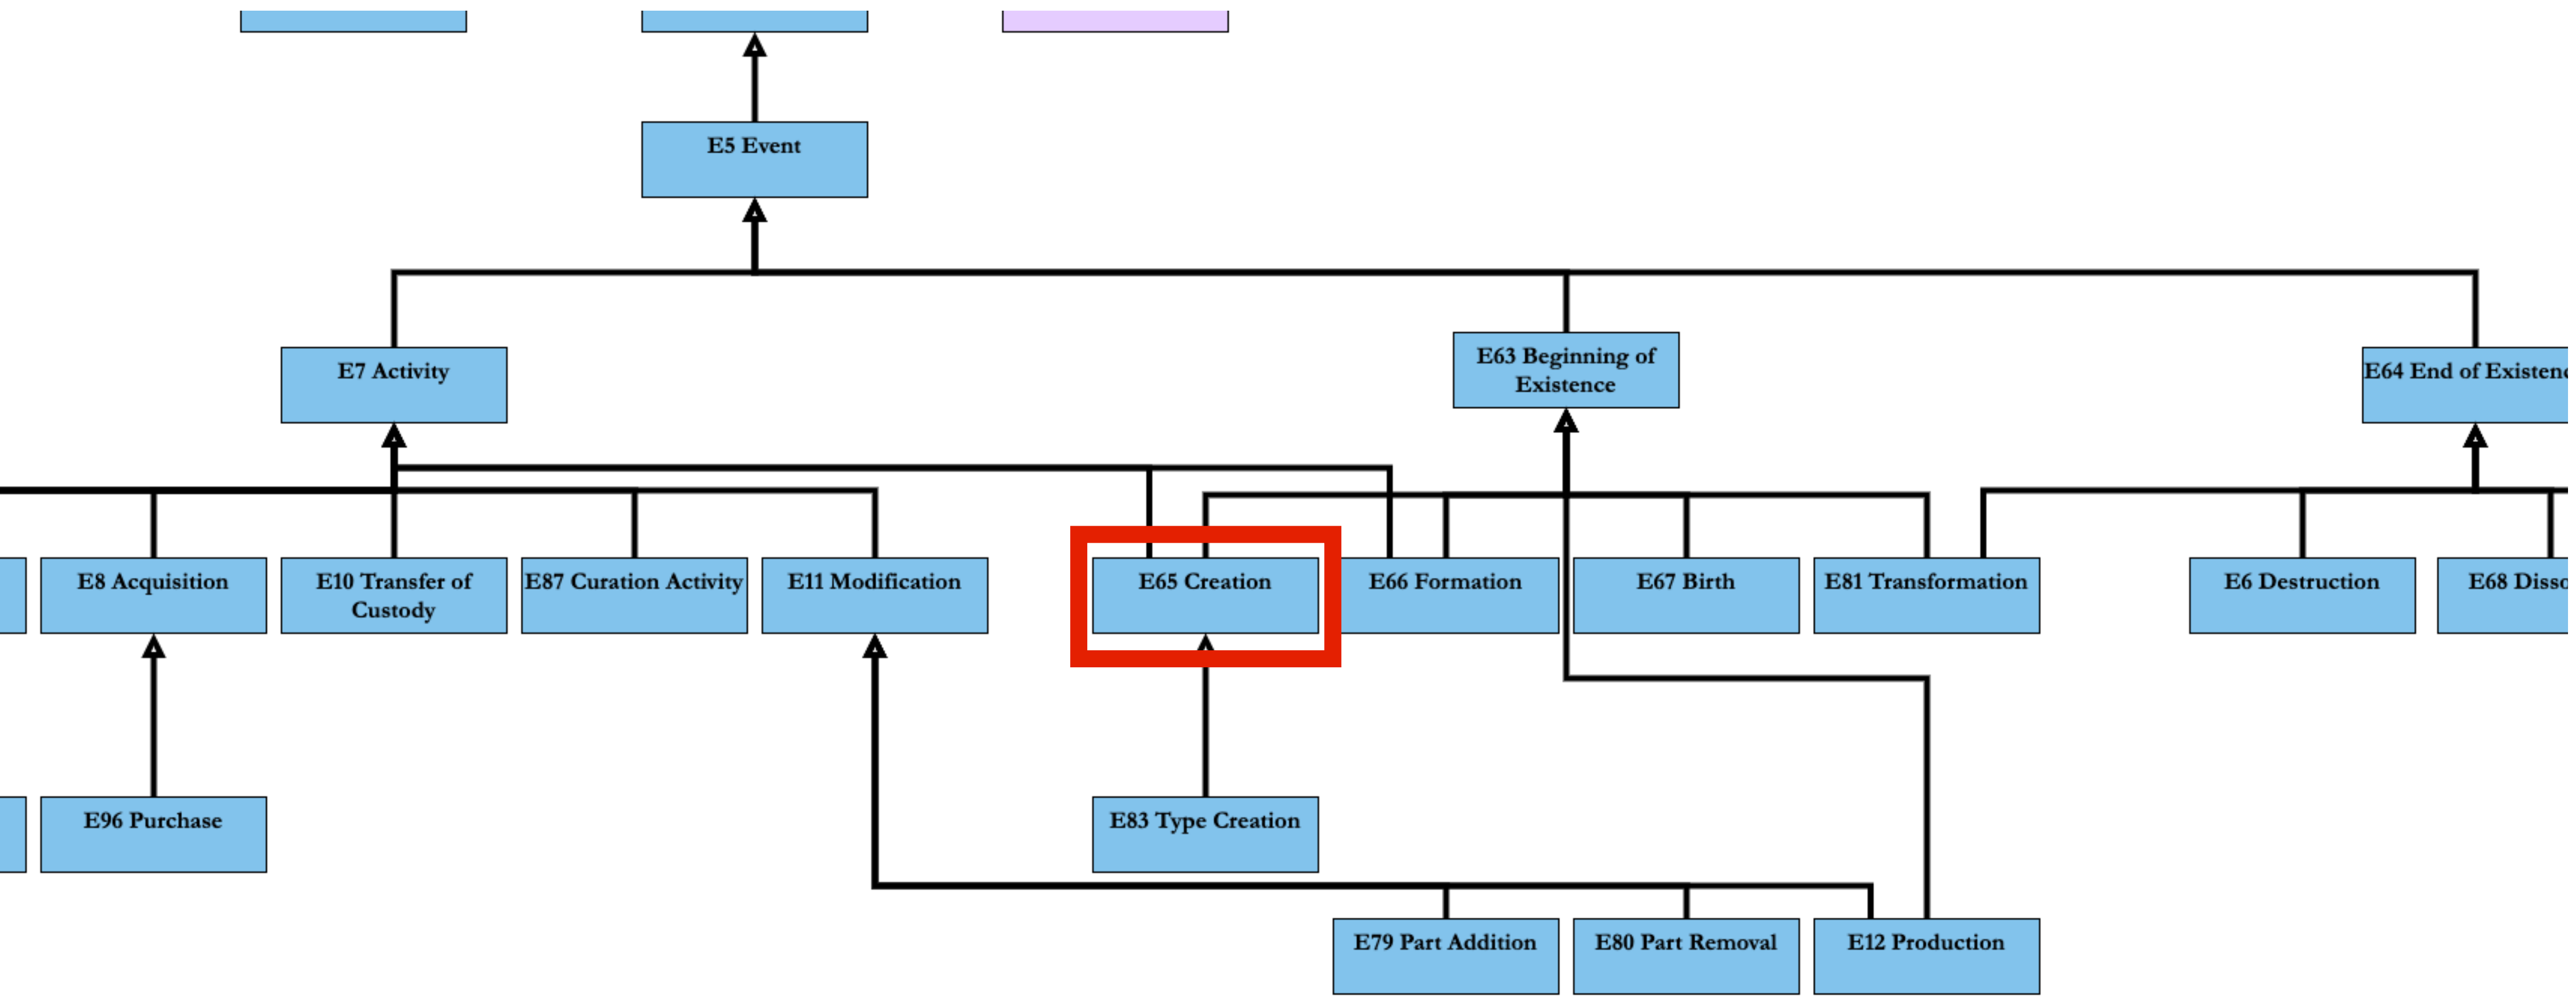

Rembrandt’s creating of the seventh state of his etching “Woman sitting half dressed beside a stove”, 1658, identified by Bartsch Number 197 (E12, E65, E81) (Hind, 1923)

Giotto

Nel borgo di Monte Marano, presso Benevento era morta una donna particolarmente devota di san Francesco. La sera vennero i chierici per le esequie e già apprestavano a celebrare la veglia con la recita dei salmi quando improvvisamente, alla vista di tutti, la donna si alzò sul letto e chiamò i sacerdoti presenti, che era il suo padrino, e gli disse: \"Padre, voglio confessarmi. Ascolta il mio peccato. Quando sono morta, io dovevo essere gettata in un' prigione, perché non avevo confessato il peccato che sto per dirti. Ma pregato san Francesco, che durante la vita ho sempre servito con devozione, mi è stato concesso di ritornare ora nel corpo, per confessare quel peccato e meritarmi la vita eterna. Dopo che lo avrò confessato, ecco, mi affrettò alla pace promessa\". Tremando si confessò al sacerdote tremante, ricevuta l'assoluzione, si stese in pace sul suo letto e s'addormentò felicemente nel Signore
